4. Power consumption is calculated in accordance with Regulation (EU) 2017-1151.

5. The WLTP range and consumption values are obtained under standard EU test conditions, according to the uniform provisions concerning the approval of motor vehicles with regard to the emissions based on the new World Harmonized Light Vehicle Test Procedure (WLTP). The actual range and energy consumption figures may vary due to a number of factors such as weather conditions, traffic situation, vehicle load and driving behaviours.

6. The charging time and speed for electric vehicles can vary based on factors such as battery temperature, specifications of the charging infrastructure, and the state of charge. To achieve the highest charging speed, it is necessary to use a CCS2 direct current charger with an output power greater than 150 kW, voltage over 750 V, and current above 200 A, under optimal environmental temperature conditions (around 25°C) and with the State of Charge (SOC) being less than 60%.

7. Roof load capacity is only available for OEM verified roof racks, please contact your dealer or BYD official for further details.
